(Tentative) SYLLABUS: Sociology of the Climate Emergency Spring 2023

SOCIOL 122 001 - LEC 001

Department of Sociology, University of California, Berkeley

Monday and Wednesday, 630-8 pm, Room: Anthro / Art 160

Professor: Daniel Aldana Cohen, Department of Sociology, Director of the Socio-Spatial Climate Collaborative, or (SC)2

Email: dacohen@berkeley.edu

Discussion section times:
Office hours and location:
Wednesday 3-5 pm. Book here. Please email directly if you are unable to find a time on Calendly.

IMPORTANT:

Basics:
We live in a terrifying time of great uncertainty. We must all adapt as best we can, trying to meet each other’s needs. This is a tentative syllabus. We will finalize it in early 2023.

Further notes on course elements and meeting times.

- This course will have a weekly discussion section led by a Graduate Student Instructor (GSI)
- You will be expected to submit a 150-200 word discussion post on bCourses by 10 pm on the Sunday night before the Monday class, and comment on at least two other students’ posts before class; you may skip the online posts for two classes at your discretion.
- Every class will include some time in breakout groups where you discuss core concepts from the readings and lectures, and complete short surveys via google forms. I’ll ask some breakout groups to report back, to ensure that we know what’s going on with the readings and the course’s core ideas.
- Each class includes an audio-visual component to vary the learning method; often, it is a chance to meet one of the readings’ authors.
- The reading load of the course is moderate. But please note, in many classes you have the option to select which readings you want to do. I will use surveys to assess reading progress throughout the course, and will adjust as needed to ensure that the reading load is manageable.
I have included “recommended readings” *in case you want to deepen your knowledge.* These are entirely optional, and you are not expected to cite these readings in your weekly reflections, or in your take-home essays.

**Intellectual agenda:**

The climate emergency is in many ways new. And it is urgent beyond words. The world’s best scientists have said that to have a good chance of keeping global heating to the safest level of heating (1.5 degrees Celsius), we must cut global carbon emissions by nearly half by 2030, and must make “far-reaching and unprecedented changes in all aspects of society.” (Or, as Naomi Klein puts it, we must “change everything.”) But. If we only consider the current emergency in terms of the last five, ten, one hundred, or even one thousand years, we may fail to understand some of the fundamental reasons why we are in this emergency; and by misdiagnosing the cause, we may pursue inadequate solutions. Likewise, because heat-trapping greenhouse gas (GHG) emissions are so profoundly entwined in our energy and land use systems; our political economy; and our intersecting systems of patriarchy, white supremacy, and colonialism; it is impossible to pursue GHG reductions in isolation from these broader dynamics.

Indeed, we are in the midst of a radical environmental turn across the social sciences. Cutting-edge scholars across the social sciences and humanities are interrogating every foundation of their discipline. Sociology, for instance, has long been organized around the idea of “social facts,” an idea from the 19th century. But scholars are increasingly recognizing that the idea that we do (or should) belong to a society “separate” from nature is an illusion—or, more precisely, an ideology used to justify European colonialism, and to celebrate a certain form of privileged lifestyle more generally. To make sense of the climate emergency, we need a new common sense. And to sustain that common sense, we have to revise and improve our concepts and empirical accounts of the past—down to the most basic ways that human beings have related to non-human nature since the emergence of our species. We thus devote three weeks to Simon Lewis’s and Mark Maslin’s *The Human Planet*, a brilliant historical synthesis of
new developments in a wide range of fields, combining earth systems analysis with the histories of organized social life, capitalism, and colonialism.

This course first begins with a brief sketch of the core climate challenges. Then, through a reading of *The Human Planet*, it undertakes a more holistic, historical approach, which we continue through classic and new work on Black Reconstruction and Indigenous struggles. The historical re-grounding makes up the first half of the class. The second half of the class surveys some of the leading social science, especially sociology, on the climate crisis, building on that broader foundation. We work toward a consideration of whether a “Green New Deal” approach, broadly understood, can address the climate emergency. Shorter: we first situate the climate emergency in some broad historical developments in humans relationship to nature—especially capitalism and colonialism—and then we explore a handful of contemporary social science of climate debates in light of those foundations.

The fundamental goal of the course is to equip you intellectually to better understand the climate emergency—it's causes, its entanglements with other issues, and some potential strategies for stabilizing the climate—from a critical social science perspective, anchored in sociology. My hope is that this deeper, more contextual understanding will sharpen your analysis of contemporary climate policy struggles.

We are on a tight timeline. We do have many ways to act. I hope this class will be as helpful for people who are doing activism right now as for those who are less certain about whether or how to take action. It should also help those focused on building research careers, whether in or outside academia. All the historical readings are designed to enrich our understanding of the present moment, and our futures. And while covid protocols and the lecture format will limit our interactions to some extent, we will all work to learn from each other, with each of us bringing unique perspectives, back-stories, interests, and experiences into the conversation. Although this is a text-heavy class, we will be connecting the texts to our
everyday lives. We have one decade to make major changes to the global economy—this isn’t an “academic” exercise.

We will operationalize this “action-oriented” element of the class with the major group assignment, in which you will use analytic skills developed in the class (and elsewhere) to analyze why a certain decarbonization pathway has been blocked—and what to do about it.

I have thought carefully about which materials to include in the class. That being said, I am open to significant revision of the topics covered. (E.g. given limited time, we do not cover issues like social movement organizing, labor, or urban politics, and instead cover topics like climate diplomacy and social psychology. Choices are inevitable; but some of the choices here are somewhat arbitrary and we can adjust the topical focus of some weeks to students’ interests.)

Lectures:
Each class will feature lectures and some small-group discussions. I’ll use lectures to highlight the core arguments of class readings, the core evidence supporting those arguments, and to lay out additional context and ideas. We’ll use small-group discussions and google quizzes to ensure that students are following along, and to provide spaces for them to share their own ideas and interpretations. I will always use the lectures to explain core methods and ideas in (environmental) social science. And I will devote class time to developing some of the core reading and writing skills needed to excel in this and other social science courses.

Discussion sections:
In discussion sections, you’ll have time and space to discuss the class’s readings in a more intimate setting. And you’ll working with your group, and the GSI, on the class’s major group assignemnt.

Readings:
All readings will be made available online through bCourses. You’re also encouraged, but not required, to keep up with news about climate change. The readings in the first half of the class are designed to provide an intellectual foundation for thinking about climate change in its full social and historical context. The readings in the second half of the class are designed to equip students to analyze some key controversies in contemporary climate politics, including tools that can be used for any number of additional issues. The class will split attention between the United States and the rest of the world, with a slight majority of the focus being on the U.S.

**Attendance:**

Doing the readings and attending class are required. You’re always expected to show up with something to say about the readings, and to be prepared to partake in group work and online surveys. *That being said, if you are feeling any potential covid symptoms, if you have tested positive, if you have been exposed, or you should otherwise be in quarantine, please do not attend!* I will make course slides, an audio recording of the class, and all course-related materials available on bCourses.

**Professionalism:**

Professionalism is important at Berkeley for staff, faculty, and students. In the classroom, it implies the following: (a) being accountable and taking responsibility for your actions; (b) keeping appointments; (c) being honest; (d) being engaged with the topic and the class; (e) communicating clearly and concisely in class and over email; (f) arriving on time and ready to work; (h) keeping the professor aware of any situations that might affect your performance; and (i) fostering a relationship of mutual respect—*no sexist, racist, homophobic, or otherwise disrespectful comments will be tolerated.*

**Assignments:**

**Participation (30 pts):**
• You are expected to post 150-200 word reactions to the readings on bCourses each week. The reaction post is due by 10 p.m. on Monday evening. **No reaction is required for the first week.** You can skip an additional three weeks without penalty.

• I will provide reaction prompts and open a forum on bCourses no later than the weekend before the reaction posts are due. You are welcome to react to my prompt. But it is not required! As long as your reaction is thoughtful, the format is flexible. Write what moves you. You may find it helpful to use the reaction posts to *both* clarify something that seemed confusing and take the chance to express an opinion, some uncertainty, and/or connect dots between readings—whatever gets your neurons firing.

• I will read your reactions before finalizing course lectures.

• You are also expected to write brief responses to two other students’ reactions. And you can respond more, of course, when interesting threads develop.
  ○ Note: We will read but not “grade” the reaction posts in detail. If your reaction post completely lacks care, you will receive only partial credit that week.
  ○ If you write reaction posts for 11 weeks, including responses to other students’ posts, you will get full participation credit.

• In addition, you are expected to participate in small-group discussions in class, as well as online polls taken during class.

• You are also expected to attend your weekly discussion section meetings and to have something to say about the course content each week. That being said, shyness will not be penalized!

• Overall, 15 pts of participation will come from your weekly reaction posts; and 15 pts will come from participation in weekly discussions.

**In-class midterm assignment (30 points), distributed Feb 25th, due March 6th, 10 pm:**

• You will have over a week to answer two short essay prompts, with texts of 1500-2000 words each. You will have a choice between prompts. The point isn’t to provide a gotcha test, but to
give you the chance to develop an argument based on your engagement with the course material.

**Major group assignment (40 pts); final project due May 8, 10 pm:**

- Groups of 3-4 students, formed within their weekly discussion section, will identify a jurisdiction (e.g., San Francisco), or a sector of the economy (e.g., concrete). They will choose 1-3 decarbonization plans for that sector. Then they will provide a) a sociological analysis or why this technically feasible plan is not occurring, and b) suggestions for how to overcome those barriers (including reforms to the plans themselves). The final product will include a 25-30 page report (including writing, visuals, and any additional analysis); a 20-minute presentation to the weekly discussion section; an 8-minute presentation to the entire class on the final day.

- The grading for the assignment will be broken down as follows:
  - Initial proposal: 5 pts (due February 13)
  - 1st draft: 10 pts (due April 10)
  - Final draft: 20 pts (due May 8)
  - Presentation to discussion section: 5 pts

- Rubrics for each assignment will be provided in advance

- Readings and discussion sections in the second half of the class will all focus on how various social (and economic, cultural, political, and psychological) forces have prevented technically feasible pathways for decarbonization from advancing

**Care:**

This is an extremely difficult time—and for many of us, challenging at the most basic levels of economic survival, mental well-being, physical health, and so on. Basic collective care and self-care come first. We will be sure to check in with each other. And I will of course not penalize anyone facing the kinds of challenges that make ordinary coursework even more difficult. Berkeley has policies and resources, there are many mutual aid groups on campus and in communities in the East Bay and
elsewhere. If students feel that they are lacking information on potential support systems, we will create a shared database. **Support Resources** include emotional, physical, safety, social, and other basic wellbeing resources for students. Academic resources can be found at the **Student Learning Center** and **English Language Resource** sites. Berkeley’s Office of Emergency Management has resources to **prepare for emergencies**.

The pandemic has made all of this harder. A large number of students will have direct caregiving responsibilities in their lives—including of family members, friends, partners, and other members of their communities. This essential work cannot be devalued or ignored. This course is organized to maximize student flexibility during this challenging time, by emphasizing continuous learning through reading (including options on what to choose to read), weekly reaction posts (two of which can be skipped at no penalty), and just two open-ended written assignments. Consistent small-group work online and in person will offer opportunities for peer learning. Please let me know if your caregiving responsibilities are creating problems that require additional adjustments to evaluation.

**Basic Needs:**
If you are facing challenges securing food or housing during the semester, please seek out resources for support and help. It can be challenging to do your best in class if you are having trouble meeting your basic needs. You can find a list of key campus resources at the following webpage ([https://basicneeds.berkeley.edu/](https://basicneeds.berkeley.edu/)) as well as information about accessing the **UC Berkeley Food Pantry**. Additionally, please notify me of your situation if you are comfortable doing so as this will allow me to make necessary class accommodations or assist you as I can within my capacity.

**Students with Disabilities:**
If you require course accommodations due to a physical, emotional, or learning disability, contact **UC Berkeley’s Disabled Students’ Program (DSP)**. Notify the instructor and GSI through course email of
the accommodations you would like to use. You must have a Letter of Accommodation on file with UC Berkeley to have accommodations made in the course.

UC Berkeley is committed to providing robust educational experiences for all learners. With this goal in mind, we have activated the ALLY tool for this course. You will now be able to download reading materials in a format that best fits your learning preference (i.e., PDF, HTML, EPUB, and MP3). For more information visit the alternative formats link or watch the video entitled, "Ally in bCourses."

**Diversity Statement:**
Consistent with UC Berkeley’s Principles of Community, we are all responsible for creating an inclusive learning environment where diverse perspectives—expressed through race and ethnicity, culture, gender identities and sexual orientations, political and social views, religious and spiritual beliefs, learning and physical abilities, language and geographic characteristics, age, veteran status, and social or economic classes—are recognized, respected, and seen as a source of strength. Everyone is expected to treat everyone else with respect and dignity. I welcome suggestions on how to further incorporate diversity into the course in a meaningful way. Climate change in particular can be a distressing and stressful topic—especially in the context of a global pandemic! We will be patient and understanding with each other. And we will recognize that there are no intrinsically right answers on many of the questions we take up. (The class does, however, presuppose an acceptance of the overwhelming, international scientific consensus on the basics of climate science.)

**Pronouns:**
I will address you by your preferred pronouns (and names) in class. I expect everyone to use the preferred pronouns of the person with whom they are communicating. Pronouns are important aspects of speech that are used to refer to others instead of using their name. Using the preferred pronouns is part of respectful and caring communication. More information on preferred pronouns is available on the following website: https://www.mypronouns.org/sharing
Mental Health and Wellness:
All students — regardless of background or identity — may experience a range of issues that can become barriers to learning. These issues include, but are not limited to, strained relationships, anxiety, depression, alcohol and other drug problems, difficulties with concentration, sleep, and eating, and/or lack of motivation. Such mental health concerns can diminish both academic performance and the capacity to participate in daily activities. In the event that you need mental health support, or are concerned about a friend, UC Berkeley offers many services, such as free short-term counseling at University Health Services. An excellent campus website having links to many resources is: http://recalibrate.berkeley.edu/. Another campus website addressing mental health services in specific reference to this time of the coronavirus pandemic is: https://uhs.berkeley.edu/coronavirus/student-mental-health. Remember that seeking help is a good and courageous thing to do — both for yourself and for those who care about you.

Grading:
The course is designed to keep students working at a relatively even pace throughout the semester. The mid-term and the final are designed to reward careful reading and engagement during class. In particular, they invite students to develop their own arguments and ideas about climate and society, and to develop those ideas in writing form.

Final grade:
>=93 points = A
90-92 points = A-
87-89 points = B+
83-86 points = B
80-82 points = B-
77-79 points = C+
73-76 points = C
70-72 points = C-
67-69 points = D+
63-66 points = D
<=63 points = F

Some more notes:
There is a bCourses site for this course. You are responsible for ensuring that you can access it, and for checking it regularly. I will post zoom links to all online classes the morning before class. If you miss a class, you are responsible for learning whether any changes have been announced during your absence. And you are responsible for finding out from other students what you have missed.
Any instances of plagiarism will result in severe penalties, up to and including a failing grade in the course and additional penalties.

You are expected to familiarize yourself with UC Berkeley’s policies on plagiarism and academic integrity, and the potential consequences of plagiarism.

UC Berkeley’s policy states:

Plagiarism is defined as use of intellectual material produced by another person without acknowledging its source, for example:

- Wholesale copying of passages from works of others into your homework, essay, term paper, or dissertation without acknowledgment.
- Use of the views, opinions, or insights of another without acknowledgment.
- Paraphrasing of another person’s characteristic or original phraseology, metaphor, or other literary device without acknowledgment.

And UC Berkeley warns of the following consequences:
If a student is found responsible for academic misconduct through the Center for Student Conduct’s process there will be a resolution plan, which will include University sanctions. Sanctions range from a non-reportable warning through dismissal from the University. In most cases, resolution plans will also include educational sanctions such as reflective writing assignment, activities, and workshops.

The good news is that avoiding this kind of problem is simple! Produce the creative, original work that you are more than capable of. This resource is also helpful on what constitutes plagiarism:

http://www.northwestern.edu/provost/policies/academic-integrity/how-to-avoid-plagiarism.html

CLASS SCHEDULE: Readings, audio-visual content, and assignments

For your own time management and efficiency of brain flow, you’re encouraged to do the full week’s reading in advance of the Monday’s class, or at least as much as possible.

WEEK 1: Welcome to the Climate Emergency

January 18:
- No reading required.
- Take online quiz on needs and hopes for course.

January 20:
- Meyer, Robinson. 2021. “It’s Grim. The latest UN report is clear: Climate change is here, it’s a crisis, and it’s caused by fossil fuels.”

Audio-visual:
- Greta Thunberg full speech at UN Climate Change COP25 - Climate Emergency Event.
- Raj Patel On Chicken Nuggets And Capitalism. Now This.
- Daniel Aldana Cohen, Penn 1.5 C lecture series.

Climate Science Background: This course doesn’t go in-depth on climate science, although key summaries are found in the readings, especially the fundamentals of climate science as presented in A Human Planet. The most reliable climate science explainers can be found at www.carbonbrief.org; for instance, see their in-depth Q&A on the last major international climate science report (the IPCC’s 2021 AR6 report summarizing recent climate science).

PART 1: HISTORICAL FOUNDATIONS

WEEK 2: The long history of climate change, part 1

January 25:
- Simon Lewis and Mark Maslin. 2018. The Human Planet: How We Created the Anthropocene. Yale University Press. Introduction, Chapters 1. (Digital scan available on bCourses)

January 27:

**Recommended reading:**

**Audio-visual:**

- [The End of the World? Award-winning scientists Profs Simon Lewis & Mark Maslin. Going Underground on RT](https://www.youtube.com/watch?v=RT) (YouTube)

**WEEK 3: The long history of climate change, part 2**

**February 1:**

**February 3:**

Audio-visual:
- [This California Tribe Is Fighting Wildfires With Fire](https://www.youtube.com/watch?v=AI+ (YouTube)
- [Brandon Smith: Begin the Decade of the Green New Deal](https://www.youtube.com/watch?v=Organizing for Justice / Sunrise (YouTube)
- Optional: [Meet the formerly incarcerated fire crew protecting California from wildfires](https://www.youtube.com/watch?v=Los Angeles Times).

Recommended reading:

WEEK 4: The long history of climate change, part 3:

February 8:

February 10:
• WEB DuBois. 1936. *Black Reconstruction in America*. “To The Reader,” Chapters 1 and 2; 26 (excerpt); pages 29-66, 861-862

Audio-visual:

• Kate Aronoff and Daniel Aldana Cohen. 2020. *Hot & Bothered: Putting Racial Justice First, with Patrick Houston*. (Podcast)

Recommended reading:

• *The Truth About Land Grabs*. *Oxfam*.

**WEEK 5: Race, Class and Social Struggle in the United States, in Global Context:**

**February 13: Initial proposal for group project due**

**February 15:**

**February 17:**

• Solnit, Rebecca. 2016. “Standing Rock protests: this is only the beginning.” *The Guardian*.

**Audio-visual:**

• *Reconstruction. Experiments in Land Owning*, *Slate* podcast.

**Recommended reading:**

**WEEK 6: Indigenous Histories of Resistance, Part 1:**

**February 22:**

February 24:

  

Audio-visual:

- OPTIONAL Nick Estes interviewed at length on *The Dig* (Transcript).

Recommended reading:

- Norgaard, Kari Marie. 2019. *Salmon and Acorns Feed Our People: Colonialism, Nature and Social Action*. Rutgers University Press. Introduction, Chapters 1-2. (Scan will be made available.)

**February 25: Take-home midterm distributed**

**WEEK 7: Indigenous Histories of Resistance, Part 2:**

March 1:

March 3:

Audio-visual:

- Optional: *[Roxanne Dunbar-Ortiz on Indigenous History](https://www.thedig.com)*. *The Dig*.

Recommended reading:

- Jesse, Nathan. 2020. *[Resisting the Oblivion of Eco-Colonialism: A Conversation with Tribal Leaders from Louisiana’s Gulf Coast](https://www.anthropocene.org)*. *Anthropocene Curriculum*.
- Dunbar-Ortiz, Roxanne. 2018. *[What White Supremacists Know](https://www.bostonreview.net)*. *Boston Review*.

March 6: Take-home midterm due by 10 pm.

PART 2: Social barriers to decarbonization: The contradictions of green racial capitalism

WEEK 8: Climate science, climate negotiations, and the problem of global inequalities:

March 8:

March 10:

• “Chapter 6: Global carbon inequality.” 2022 World Inequality Report. [Read online for interactive data features.] Skim text, look at key diagrams and visuals.

Recommended reading:

• Roberts, J. Timmons and Bradley Parks. 2007. Climate of Injustice: Global Inequality, North-South Inequality, and Global Climate Policy. Introduction, Chapters 5 and 6, skim Chapter 7.

Audio-visual:

• Watch 1 of 3
Global Climate Justice against Neo-Colonialism: New Concepts and Priorities for Just Cooperation, Socio-Spatial Climate Collaborative, or (SC)2

U.S. Engagement with Chinese Climate Politics, Socio-Spatial Climate Collaborative, or (SC)2

A Pan-American Green New Deal? Green Investment, Extraction Battles, and Reforestation, Socio-Spatial Climate Collaborative, or (SC)2

WEEK 9: Climate change psychology: The fossil fuel-Republican Party complex, and social psychology

March 17:

- **Read 2 of 3**

March 19:

- **Calculate your carbon footprint.** Net Zero.
- Play around with the website [https://realtimeinequality.org/](https://realtimeinequality.org/) to observe dramatic background changes in inequality in the U.S.
- **Read 1 of 3:**

Audio-visual:

• *Merchants of Doubt* (film). Excerpts TBD.

Recommended reading:

**WEEK 10: Fossil politics**

**March 29:**

• Brief news reports on New York fracking ban.

March 31:
• Readings on Nigerian oil politics TBD.

Audio-visual:
Hot & Bothered: Has the Fracking Bubble Finally Burst? with Bethany McLean. Dissent.

Recommended reading:

WEEK 11: Environmental justice, racism, and urban inequalities

April 5:
• Read 2 of 4
• Ranganathan, Malini and Eve Bratman. “From Urban Resilience to Abolitionist Climate Justice in Washington, DC.” Antipode. (53)1: 115-137.

April 7:
• Read 2 of 4

Audio-visual:
• Hot & Bothered: Putting Racial Justice First, with Patrick Houston.
• OPTIONAL: Hot & Bothered: Why Defunding the Police is Key to a Just Transition, with J. Mijin Cha
• OPTIONAL: Follow the Carbon, (Lecture, Daniel Aldana Cohen)

Recommended:

WEEK 12: The Energy Transition

April 10: First draft of group report due

April 12:

April 14:
• Read 1 of 2:

Audio-visual:
• The Invisible Power Struggle with Leah Stokes. Why Is This Happening? Podcast.

Graduate supplementary reading:

WEEK 13: The Green New Deal as Path Forward?

April 19:

April 21:

Audio-visual:

• *Hot & Bothered: Building Power, with Naomi Klein, Jane McAlevey, and Julian Brave NoiseCat* (or video available here).

Recommended reading:

WEEK 14: The Green New Deal and Beyond: Land, Food, Decarceration, Political Education.

April 26:

April 28:
- 5-minute presentations of final projects

May 8: Final project due
